Nordic Brown – pre-oxidised copper

House in Seeheim, Germany; Architects: Fritsch und Schlüter Architekten.

Nordic Brown™ products are pre-oxidised at Aurubis' factory to give straightaway the same oxidised brown surface that otherwise develops over time in the environment. The thickness of the oxide layer determines the colour: both Nordic Brown™ Light and the darker Nordic Brown™ versions are available.

Nordic Brown™ products are useful to minimise hand and other construction marks which can occur for a short time after installation with 'bright' standard copper. But light and dark versions can also be combined – perhaps with other finishes such as Nordic Standard – to create various visual effects.

Nordic Brown™ is available in sheets or coils.

- › Thickness range: 0.5 – 1.5 mm
- › Maximum width: 1000 mm.

It can also be provided in a wide range of different forms and used in various systems.
