

FORTECEM

MATERIAL

Cement based powder, aggregate materials, synthetic materials, elastics and additives. Water resistant, frost-resistant, elastic for the laying of insulating building materials, such as the special drywall board AKUSTIK® GIPS and FERMA-SOUND. NON-FLAMMABLE MATERIAL

FIELDS OF APPLICATION

For the installation of plasterboards combined with a heavy rubber, epdm, etc. layers on plasters, concretes, drywall, existing non-absorbent walls.

INSTALLATION

Pour clean water into a clean container and add stirring vigorously the sufficient amount of powder to obtain a lump-free, malleable dense and doughy mortar. The panelling is installed on a thick and abundant bed of mortar using a large pronged spatula. Apply on dry and wet surface provided it is solid, stable, has a good grip and has no separators. In the case of gypsum based plaster it is advisable to use a coat of primer on the surface before moving on to the pasting.

CEMENT-BASED ADHESIVE, WATER RESISTANT, FROST RESISTANT, FLEXIBLE FOR THE INSTALLATION OF INSULATION BUILDING MATERIALS

PACKAGES

Bags: from 25 kg.

Performance: 1 bag approx. 10 m²
