## MATERIAL STRUCTURE

### THE ROOF WITH TRADITION

GERARD® Roofs are the culmination of decades of development that began in New Zealand in the early 1950's. GERARD® Roofs can be found in over 130 countries worldwide.

### RESISTANT TO EXTREME CLIMATIC CONDITIONS

A GERARD® roof defies high winds, heavy rain, snow, ice and hail. It is a roof for tomorrow's climate.

### LIGHTWEIGHT AND IDEAL FOR RE-ROOFING

A GERARD® roof is up to 7 times lighter than traditional roofing products. This means substantial savings can be achieved in structural costs – no need to replace or strengthen the existing roof substructure. GERARD® tiles are not heavy or bulky, which reduces delivery costs and enables transportation to remote or mountainous areas not easily accessed by heavy goods vehicles.

### MAINTENANCE AND WORRY FREE

Once installed it requires no maintenance and will protect your house for many years to come.

### EXTREMELY LONG LASTING

GERARD® is guaranteed to be long lasting. Aluminium-zinc coated steel has superior long term corrosion resistance.

### FIRE RESISTANT

GERARD® roofs have passed stringent international fire tests. The incombustible steel substrate and surface coating prevent the spread of flames when exposed to fire. The lightweight nature of GERARD® roofs considerably reduces the potential for the roof to collapse.

### NOISE RESISTANT

Although GERARD® roofs are made of metal, they are not noisy. The natural chip coating minimises the noise of rain on the roof.

### ENVIRONMENTALLY FRIENDLY AND RECYCLABLE

Steel can be recycled infinitely, without losing any of its qualities. Rainwater collected from GERARD® roofs has been tested and meets the World Health Organisation's criteria for drinking water.

### 50 YEARS WARRANTY

GERARD® offers you a 50 years limited Waterproof Warranty, in addition to quality customer service.
